Franco-Moroccan Mathematics Days

1st edition

on the occasion of the

International Mathematics Day

Under the theme

Mathematics for everyone and everywhere

Abdelmalek Essaadi University- Faculty of Sciences of Tétouan

March 13-16, 2023

Greater global awareness of mathematical sciences and a strengthening of their teaching, as well as popularization, are vital to address many challenges of tomorrow and to improve the quality of life in both developed and developing countries. That is why, in 2019, UNESCO made the 14th March of each year the “International Day of Mathematics”, also known as the “pi-day”, π being one of the world’s most widely-known mathematical constants, whose value is close to 3.14.

In this context, the Abdelmalek Essaadi University and the Faculty of Sciences of Tetouan, in cooperation with the Sorbonne Paris Nord University and the International Association ALPaGe, organize the first edition of the French-Moroccan Mathematics Days. During these days will be held a variety of scientific activities involving training, workshops, and international conferences on scientific mediation, applied mathematics, innovation and didactics of mathematics. The last day will be a cultural wealth of north Morocco discovery.

The event will be an opportunity to build bridges between mathematical communities, reinforce existing international cooperation's and initiate new ones, hence contributing to the outreach of all involved parties.
